

WELL CONTROL INCIDENT MANAGEMENT: EFFECTIVE STRATEGIES & TACTICS FOR MUNICIPAL RESPONDERS

*A NEW COURSE ON ACHIEVING SUCCESSFUL OUTCOMES TO
OIL & GAS WELL EMERGENCIES*

Course Description

Municipal agencies responding to an oilfield emergency must deal with a unique set of safety vectors, each with the potential to catastrophically escalate if initial size-up is inaccurate and resources are ineffectively assigned.

This course is intended to prepare tactical response agencies, with local jurisdiction over oilfield emergencies to better manage their incident scenes, integrate resources, and work more effectively with oil & gas operators and well control specialists.

The ability of responders to identify common blowout scene risks and predict hydrocarbon behavior greatly increases the probability of a safe and successful mitigation.

Who Should Attend

Fire Departments, Hazmat Teams, Public Safety & Emergency Management Personnel

Course Duration & Location

3.0 hours-Tuesday **DEC. 7th 1900 to 2200** at Co.75
